SVN Access

You can checkout the latest (maybe unstable) version of kabeja from SVN with the following command:

```
svn co https://kabeja.svn.sourceforge.net/svnroot/kabeja/trunk kabeja
```

This will create a folder "kabeja" in your current directory. To build Kabeja follow the instructions from [Install](#) document. More information and a webview of the svn repository can be found at the [Sourceforge](https://sourceforge.net) site.
